PHPP

BRIEF INSTRUCTIONS

For use in EuroPHit, c

Place your mouse here to see the PHPP help.

If no help appears when the mouse passes over cell B4, you can activate it by going into the Menu Bar Tools/Options/View, and under "Comments", select "Comment Indicator Only".

Passive House Verification: Meaning of Field Formats

Example	Field Format	Meaning
78,8	Courier New, blue, bold on yellow background	Input Field: Please enter the required value here
01ud tripple-low-e-cr08	Arial Narrow, blue, bold on brown	Data entry field with drop down list
6619	Arial, black, standard on white background	Calculation field; please do not change
78,8	Courier New, purple, bold on white background	Field with references to another sheet - should not be changed.
126,0	Arial, black, large & bold on green background	**Important result**

Passive House Planning: Worksheet Directory

Worksheet name (to show/hide worksheets please use the separate 'Profile settings' tool)	Function	Brief Description	Required for the certification?
erification	Building data; summary of results	Building description, selection of the calculation method, summary of results	yes
verview	Overview of the specific data of the project entered	In-depth project description, overview of all results and input variables, specific details on building envelope, building services systems as well as general information.	no
ariants	Variant calculation	Input parameters and results for the variant calculations. Predefined fields for frequent entries, as well as user-defined area.	no
omparison	Comparison between two variants	Comparison between two variants under the energy demand and economic viability perspective. Input of comparison configurations.	no
limate	Climate Region Selection or Definition of User Data	Climate data for: Annual Heating, Windows, Heating Load, Heating, Summer, Cooling, Cooling Units, Cooling Load worksheets	yes
-Values	Calculation of Standard building assembly U-Values	Heat transmission coefficient calculations in accordance with DIN EN ISO 6946.	yes
reas	Areas summary	Building assembly Areas, Thermal Bridges, Treated Floor Area. Use exterior dimension references!	yes
round	Calculation of reduction factors against ground	More precise calculation of heat losses through the ground	if applicable
omponents	Building component database	Database of certified, Passive House suitable components and entry of user-defined components	yes
indows	U_W-Value Determination	Input of geometry, orientation, frame lengths, frame widths, U_g and U-values of the frame, and the thermal bridge heat loss coefficients of the connections; from these inputs, determine U_W and total radiation.	yes
hading	Determination of shading coefficients	Input of shading parameters, e.g. balcony, neighbouring building, window reveal and calculating the shading factors	yes
entilation	Air Flow Rates, Exhaust/Supply Air Balancing, Pressurization Test Results	Sizing the ventilation system from extract and supply air requirements, infiltration air change rate and actual efficiency of heat recovery, input of pressurization test results	yes
dditional Vent	Design and planning of ventilation systems with diverse ventilation units	Extension of the Ventilation worksheet for dimensioning air flows, for special building uses and systems with various ventilation units	if used
nnual heating	Annual heating demand / Annual Method	Calculation of the annual space heating demand according to the energy balance method following EN 13790: Transmission + Ventilation - h (Solar Gains + Internal Gains)	no
eating	Space heating demand calculation Monthly method according to EN 13790	Calculation procedure for the monthly method following EN 13790. Make appropriate selection in the Verification worksheet, if calculations should be performed following this procedure	yes
eating Load	Building Heating Load Calculation	Calculation of the nominal heating load using a balance procedure for the design day: max transmission + max ventilation - η (minimum solar gains + internal heat gains)	yes
ummVent	Determination of Summer Ventilation	Ventilation in cooling case and estimation of air flow rates for natural ventilation during the summer period	yes
ummer	Assessment of Summer Climate	Calculation of the frequency of overheating as a measure of summer comfort	yes
ooling	Monthly Method for Cooling Demand	Annual useful cooling demand calculation	if present
ooling units	Latent Cooling Energy	Calculation of the energy demand for dehumidification and choice of cooling method	if present
ooling load	Building Cooling Load Calculation	Calculation of the daily average cooling load of the building	no
HW+Distribution	Distribution losses; DHW Requirement and Losses	Heat loss calculation of the distribution systems (heating; DHW); calculation of the useful heat requirement of DHW and storage losses	yes
olarDHW	Solar DHW Heating	Solar contribution calculation for DHW and space heating contribution	if solar panels are used
V	Electricity generation by photovoltaic	Electricity generation calculation of PV system	no
lectricity	Electricity Demand for Dwellings	Calculation of the electricity demand of Passive Houses with residential use	yes
se non-res	Patterns of non-residential Utilisation	Input or selection of utilisation patterns for planning of electricity demand and internal heat gains	no
lectricity non-res	Electricity Demand for non-residential Use	Calculation of the electricity demand for lighting, electric devices and kitchens for non-residential buildings	no
ux Electricity	Auxiliary Electricity Demand	Calculation of auxiliary electricity and corresponding primary energy demand	yes
HG	Internal Heat Gains in Dwellings	Calculation of the internal heat gains based on the Electricity and Aux Electricity sheets.	no
HG non-res	Internal Heat Gains for non-residential Use	Calculation of the internal heat gains for non-residential buildings based on the Electricity non-res worksheet and the occupancy	no
E-Value	Specific Primary Energy and CO_2 Demands	Selection of heat generators, calculation of the specific primary energy and CO2 demands from the present results	yes
ompact	Efficiency of Heat Generator Compact Heat Pump Unit	Calculation of combined heat generation efficiency for heating and DHW only by means of a electric heat pump compact unit, considering the specific project boundary conditions.	if present
P	Heat generation efficiency of the heat pump	Calculation of heat generation efficiency for one to two electric-run heat pumps, considering the specific project boundary conditions.	if present
P Ground	Ground probe or ground collector in combination with a heat pump	Heat source calculation for a ground probe or horizontal subsoil heat exchanger for ground-coupled heat pumps, considering the specific project boundary conditions.	if present
oiler	Efficiency of Heat Generator Boiler	For the calculation of the efficiency of heat generation with standard boilers (NT and calorific boilers) for the project given boundary conditions.	if present
istrict Heating	District Heat Transfer Station	Calculation of the final and primary energy demands (heat)	if present
ata	Database	Table of primary energy factors following [GEMIS] and database of EnEV (German energy efficiency regulation).	no

EnerPHit verification

PROJECT OVERVIEW

Basic data

Building, name of the object	Primary School 8 "Sveti Sveti Kiril I Metodi" -		
Street:	69 Mogilov blv.		
Postcode/City:	Gabrovo		
Country:	Bulgaria		
Building type:			
Climate: region / climate data set	User Data		User data - Вел
Climate: degree days / altitude	77	kKh/a	426
Building type / building status	School | University		
Context of urban development	Urban development		
Building type / construction	EnerPHit building retrofit (acc. to heating demand)		
Building category, in terms of energy	EnerPHit-i		
Year of construction / year of construction of existing building	2014		1970,0
Amount of dwelling units for residential use / non-residential use		Dwelling units	46
Number of occupants standard / planned		P	680
Standard / design occupancy rate		m²/P	7
Home owner / client	Municipality of Gabrovo		
Architect			
Building services			
PHPP/Energy balance			
Building physics			
Structural engineering			
Contractor / tradesperson / other (max. 5000 characters)			
Interior temperatures winter/summer	20	°C	25
IHG winter / summer	2,8	W/m²	2,8
Type of certification	EnerPHit building retrofit (acc. to heating dem		
Project certification / Certificate ID			
Certification body			
PHPP-version / PHPP-registration number	Version 9.0 beta		

Characteristic value according to EnerPHit verification

Treated floor area A_{TFA} / exterior volume V_e	4630,41	m²	15290,25
	Specific Demand		Requirement
Space heating demand	17	kWh/(m²a)	25
Heating load residential		kWh/(m²a)	-
Heating load Non-residential	13	kWh/(m²a)	-
Frequency of overheating	3	%	Recommendation: < 10%
Overall specific space cooling demand		kWh/(m²a)	-
Cooling load residential		kWh/(m²a)	-
Cooling load non-residential	13	kWh/(m²a)	-
Airtightness pressure air exchange rate test n_{50}	1,0	1/h	1
Total PE Value	90	kWh/(m²a)	123
Heating, cooling, DHW, auxiliary electricity, lighting, electrical appliances			
Specific PE Demand - Mechanical System / CO_2-Equivalent	63	kWh/(m²a)	15
Heating, DHW, auxiliary electricity (no lighting and electrical appliances)			
Solar power: Primary energy savings / CO2 emissions		kWh/(m²a)	

Average building quality

	Specific Demand		Requirement
Average U-value of external insulation to outside air	0,14	W/(m²K)	-
Average U-value of external insulation to ground	1,76	W/(m²K)	-
Average U-value interior insulation to outside air		W/(m²K)	-
Average U-value interior insulation to ground	3,18	W/(m²K)	-
Average U-value of thermal bridges ΔU	0,00	W/(m²K)	-
Average U-value windows	0,97	W/(m²K)	-
Average U-value of exterior doors	2,20	W/(m²K)	-
Ventilation system eff. heat recovery efficiency	80,83	%	-

Building envelope and site

Building envelope area A_{total} / treated floor area A_{TFA}	7287	m²	4630
A/V-ratio / Envelope area use (A_{total}/A_{TFA})	0,48		1,57
Window area / Window area percentage	1248	m²	17,1%
Specific solar aperture / Passive solar heating mode	2,4%		47346
Building site area / built-up area		m²	
Gross floor area BGF / Gross external volume BRI		m²	
Floor space ratio / Amount of complete storeys			

Building description (max.5000 characters)

Opaque building components			
Exterior wall: U-value (average value) / area	0,14	W/(m²K)	2553,98
Standard exterior wall: U-value / thickness		W/(m²K)	0,0
Standard exterior wall: total area / area fraction		W/(m²K)	
Standard exterior wall: name / certified?			
Standard exterior wall: short description (materials, manufacturer, product name, special features)			
Exterior wall against ground: U-value (average value) / area	0,18	W/(m²K)	362,08
Standard exterior wall against ground: U-value / thickness		W/(m²K)	0,0
Standard exterior wall against ground: area / area fraction		W/(m²K)	
Standard exterior wall against ground: name / certified?			
Standard exterior wall against ground: short description (materials, manufacturer, product name, special features)			
Roof / top floor ceiling: U-value (average value) / area	0,13	W/(m²K)	1557,73
Standard roof / top floor ceiling: U-value / thickness		W/(m²K)	0,0
Standard roof / top floor ceiling: area / area percentage		W/(m²K)	
Standard roof / top floor ceiling: name / certified?			
Standard roof / top floor ceiling: short description (materials, manufacturer, product name, special features)			

Floor slab / basement ceiling: U-value (average value) / area	2,60	W/(m²K)	1557,73
Standard floor slab / basement ceiling: U-value / thickness		W/(m²K)	0,0
Floor slab / basement ceiling standard: area / area fraction		W/(m²K)	
Standard floor slab / basement ceiling: name / certified?			
Standard floor slab / basement ceiling: short description (materials, manufacturer, product name, special features)			
Thermal bridges: Y-value (Average value) / length	-0,069	W/(mK)	590,05
Thermal bridge free limit value / Complied?	0,01	W/(mK)	yes
Thermal bridges: short description (max.5000 letters) (additional notices, manufacturer, product name, materials, others)			

Windows / doors / shading systems

windows/facades: U-value (average value) / area	0,97	W/(m²K)	1247,78
window/facade frames: U-value (average value) / area	0,80	W/(m²K)	605,89
Glazing: U-value (Average value) / areas	0,80	W/(m²K)	641,89
Ψ-Value Glazing edge (average) / Ψ-Value Installation (average)	0,030	W/(mK)	0,040
Standard window frame: U-value / frame width		W/(m²K)	
Standard window frame: window area / area percentage		W/(m²K)	
Standard window frame: glass edge Ψ-value / installation Ψ-value		W/(mK)	
Standard window frame: name, certified?			
Standard window frame: Short description (materials, manufacturer, product name, installation)			
Standard curtain wall facade: U-value / Frame width		W/(m²K)	
Standard curtain wall facade: Facade area / Total area percentage		W/(m²K)	
Standard curtain wall facade:Ψ-value glazing edge / Ψ-value installation		W/(mK)	
Standard curtain wall facade: Description / Certified?			
Standard curtain wall facade: short description (materials, manufacturer, product name, installation)			
Standard glazing: U-value / g-value		W/(m²K)	
Standard glazing: Facade area / Area ratio		W/(m²K)	
Standard glazing: Description / Certified?			
Standard glazing: short description (description, manufacturer, product name, installation)			
Standard glazing 2: U-value / g-value		W/(m²K)	
Standard glazing 2: Facade area / Area percentage		W/(m²K)	
Standard glazing 2: Description / Certified?			
Standard glazing 2: short description (description, manufacturer, product name, installation)			
Roof lights / light domes: U-value / frame width		W/(m²K)	
Roof lights / light domes: window area / area section		W/(m²K)	
Roof lights / light domes: glazing U-value / g-value		W/(m²K)	
Roof lights / light domes: Y-value glass edge / Installation Y-value		W/(mK)	
Roof lights / light domes: name / certified?			
Roof lights / light domes: short description (materials, manufacturer, product name, installation situation)			
Exterior door: U-value (average value) / Area	2,20	W/(m²K)	7,97
Standard exterior door: door U-value / door U-value installed		W/(m²K)	
Standard exterior door: frame U-value / door leaf U-value		W/(m²K)	
Standard exterior door: door leaf thickness / frame width		mm	
Standard exterior door: panel border Y-value / installation Y-value		W/(mK)	
Standard exterior door: Name / certified?			
Standard exterior door: Short description (materials, manufacturer, product name, installation situation)			
Temporary sun protection: Type / Add. Reduction factor		W/(m²K)	5,75
Temporary sun protection: Area / Area ratio		W/(m²K)	

Shading reduction factors: orientation	Reduction factor winter		Summer reduction factor
North	81	%	53
East	60	%	43
South	68	%	40
West	51	%	34
Horizontal	100	%	100

Ventilation

Ventilation: Type of ventilation	Balanced PH-Ventilation with HR		
Calculated supply air demand / supply air per person	10200	m³/h	15
Calculated extract air demand / Amount extract air rooms	0	m³/h	
Design air flow rate (maximum) / Average value reference to maximum		m³/h	55
Average flow rate / Average air exchange		m³/h	
Airtightness test pressure at n_{50} / Air permeability q_{50}	1,00	1/h	0,87
Net air flow for pressurization test / Infiltration flow $n_{V,Rest}$	6329	m³	0,04
Ventilation unit: Description / Certified?			
Ventilation system: effective heat recovery efficiency / electrical efficiency		%	
Ventilation system: Description (type of heat recovery, manufacturer, product name)			
Ventilation system: installation site / Temperature of mechanical services room			20
Nominal width exterior or supply air / exhaust or extract air ducts	60	mm	60
Conductance ambient- or supply air duct / exhaust- or extract air duct		W/(mK)	
Length ambient- or supply air duct / exhaust- or extract air duct	2,00	m	2,00
SHX: efficiency / effective heat recovery efficiency		%	0,00
HE defrosting / Defrosting at a minimum temperature of	yes		4,00
Effective energy recovery efficiency ventilation / Humidity recovery		%	0,0
Ventilation system: Short description (installation site, ducts, silencers, others)			

Summer ventilation

Summer base ventilation: ventilation type		
Air exchange via ventilation system with supply air:	Without heat recovery	1,17
Air exchange via extract air system		0,62
Window ventilation air exchange		0,14
Night summer ventilation: Type of ventilation		
Night air exchange Window Night Ventilation, Manual		0,00
Night air exchange mechanical, automatically Controlled ventilation	Humidity differenceregulated	0,62
Summer ventilation: short description (window opening profiles, night ventilation concepts, others)		

Cooling

Max. indoor absolute humidity / Internal humidity sources	12,0	g/kg	2,0
Frequency of overheating / Overtemperature limit:	3,1	%	25,0
Mechanical cooling: Applied cooling units			
		kW	
		kW	
	0,0		
		kWh/(m²a)	
Mechanical cooling: Average annual coefficient of performance / Electricity demand			0,0
Mechanical cooling: Short description (unit, manufacturer, product name, installation site, installation)			

Heating and DHW				
DHW Demand	12,83	kWh/(m²a)	59405	
Annual heating demand	17,46	kWh/(m²a)	80824	
Direct electricity: contribution to space heating / domestic hot water		%		
PE value energy carrier / CO_2-emission factor		kWh/kWh		
Direct electric heating / domestic hot water				
Final energy demand		kWh/(m²a)		
Direct electricity: short description (description, manufacturer, product name)				
Heat pump: covered fraction of space heating / domestic hot water		%		
PE value energy carrier / CO_2-emission factor		kWh/kWh		
COP heat pump for heating / heat pump for DHW				
Final energy demand		kWh/(m²a)		
Compact unit: Short description (description, manufacturer, product name)				
Compact unit: covered fraction of space heating / domestic hot water		%		
PE value energy carrier / CO_2-emission factor		kWh/kWh		
COP heat pump for heating / heat pump for DHW				
Final energy demand		kWh/(m²a)		
Compact unit: Short description (description, manufacturer, product name)				
Boiler: covered fraction of space heating / domestic hot water	100	%	100	
PE value energy carrier / CO_2-emission factor	1,1	kWh/kWh	250	
Heat generator: building type / COP	Low Temperature Boi-ler Gas		114	
Final energy demand	31,5	kWh/(m²a)		
Boiler: short description (description, manufacturer, product name)				
District heating: Covered fraction of space heating / domestic hot water		%		
PE value energy carrier / CO_2-emission factor		kWh/kWh		
Heat source / Performance of heat generator				
Final energy demand		kWh/(m²a)		
Compact unit: Short description (description, manufacturer, product name)				

Solarthermics			
Collector	Improved flat plate PK SL AL		
Collector area / Specific collector area	22,30	m²	0,03
Deviation from north / Angle of inclination from the horizontal	180	°	45
Solarthermics: Short description (description, manufacturer, product name, installation location)			
Solar contribution to DHW	1,86	kWh/(m²a)	15
Solar contribution to space heating	0,71	kWh/(m²a)	4
Solar contribution total	2,57	kWh/(m²a)	8
Solar Storage	Water storage two heat exchangers		

PHOTOVOLTAIC			
Module technology	Poly-Si		
Nominal current / Nominal voltage		A	30,60
Nominal power / Number of modules	#WERT!	Wp	45
Deviation from north / Angle of inclination from the horizontal	180	°	45
Solarthermics: Short description (description, manufacturer, product name, installation location)			
Annual yield of PV modules		kWh/(m²a)	

Aux. electricity / Household electricity

Aux Electricity

Ventilation units / Electricity demand			47505
Heating system Devices / Electricity demand			2318

Selection of ventilation data input - Results

The PHPP offers two methods for dimensioning the air quantities and choosing the ventilation unit. Fresh air or extract air quantities for residential buildings and parameters for ventilation system can be determined using the standard planning option in the 'Ventilation' sheet. The 'Additional Vent' sheet has been created for more complex ventilation systems and allows up to 10 different ve Furthermore, air quantities can be determined on a room-by-room or zone-by-zone basis. Please select your design method here.

Recommendations for dimensioning air quantities

Use of low odour and low-emission building materials/ furnishings:
It is strongly recommended to use building materials that cause no or only little pollution instead of increasing the outdoor air volume flow in order to reduce preventable pollution.
This holds true independently from the chosen approach for the air quality determination; emissions of all sources in the room should be considered, e.g. furniture, carpets and ventilation or air-conditioning unit.

Assessment of volume flow rates according to the number of persons
Also in non-residential buildings, the number of persons is fundamentally important for assessing the volume air flow rates. For good indoor air quality the amounts of 20 to 30 m³/h/person are completely sufficient.
Higher outdoor air amounts may lead to excessively dry indoor air in winter. The air flow rates are specified by classification according to EN 13779. The classification must be agreed with the client in advance.
IDA 3 is adequate for office buildings. IDA 4 has proven satisfactory for school buildings as purge ventilation is carried out during breaks anyway. For typical external air CO_2 concentrations of around 400-500 ppm, it is possible to comply even with 1500 ppm. Exceeding this figure temporarily is permissible.

Fresh air flow rates per person:
- Recommended for residential buildings: around 30 m³/(h person)
- Recommended for offices and similar uses: around 30 m³/(h person) (AMEV: 28 m³/(h person); EN 13779 / IDA 3: at least 24 m³/(h person))
- Recommended for schools and day care centres: 15 to 20 m³/(h person) (Source: Guidelines for energy-efficient educational buildings, Passive House Institute, 2010)
- Recommendation for sport halls: 60 m³/(h person) (DIN 18032-1)

Purging phase for intermittent ventilation operation
Due to the purge ventilation phase, the ventilation operation period is extended accordingly (utilisation time + purge ventilation phase). Please consider this for the ventilation design.
Emissions have to be removed. Flushing the building prolongs the utilization time of the ventilation system (utilization time + flushing phase). Please consider this at design stage.

Design of air quantities

When designing the air quantities, please consider the design recommendations given above.
The ventilation operation period can be determined on the basis of the daily utilisation hours including purging phase if applicable. In addition, time periods with reduced ventilation requirements (operation modes) can be
Taken into account by means of reduction factors.

Ventilation unit selection

Up to 10 different ventilation units are considered. By changing the amount, identical units can be considered. The data from PHI certified ventilation units
as well as the entry data lines for user data for other ventilation units can also be found in the worksheet "Components". When choosing to use a compact unit the standard design in the Ventilation worksheet has to be used.

Go to ventilation units list

Data entries for duct sections between the ventilation unit and the thermal envelope

The duct sections between the ventilation unit and the thermal envelope should be as short as possible and should be well insulated, both for interior as for exterior location of the ventilation unit. These duct sections can be entered here. The heat losses of the overlying duct section will be considered for the effective heat recovery efficiency.
An entered duct section can also be used for multiple ventilation units.
If in the section "Ventilation unit - selection" in one line a ventilation unit is selected as multiple units (amount larger than 1 for identical units), then the corresponding duct sections may simply be entered (duct sections for one ventilation unit).

Temperature of the location of installation: 20,0 (only enter when at least one unit is installed outside of the thermal envelope)
